

Click on Tools Account Settings, select your e-mail account

Click on Repair (Outlook will attempt to set it up automatically) or select Change.

If your email account is with EmBurst, change SMTP server to mail.emburst.co.za

If your email account is with EmCom, change SMTP server to mail.emcom.za.net

Remember to enable "my server requires authentication" and click on to "use same settings as my incoming mail server".

If your e-mail account is elsewhere, e.g. myname@mweb.co.za then use their SMTP server, and in the authentication tab, click, log into incoming mail server first.

Test account settings.
